The Riot Control Grenade is a high volume, continuous discharge grenade available in OC, CN and CS. Built on a smaller scale than the Spede-Heat™ version; it is similar to the military design.

In the OC, CN and CS configurations, pelletized chemical agent is discharged through four (4) gas ports located on top of the canister and one (1) on the bottom.

Designed specifically for outdoor use in crowd control situations, the Riot Control Grenade is a high volume continuous burn canister that expels its payload in approximately 20 - 40 seconds. It has slightly less chemical content than the Spede-Heat™ version, but differs mainly in size. The longer burn time may allow for throwback by individuals wearing burn protection such as a welder's mitt. The canisters may be protected from advancing individuals with the use of less lethal impact munitions. The device should be deployed utilizing wind advantage.

It should NOT be deployed onto rooftops, in crawl spaces, or indoors due to its fire-producing capability. Hand throw or launch use only. Launching of grenades will provide deploying officers additional stand-off distances. This grenade offers coverage for large outdoor areas.
