The Saf-Smoke™ Grenade is a high volume, continuous discharge grenade. Saf-Smoke™ is discharged through four (4) gas ports located on top of the canister and one (1) located on the bottom. It is similar in size to the military-style grenade.

The Saf-Smoke™ Grenade was designed for training, but may also be used in operations. The Saf-Smoke™ Grenade offers the same approximate burn times as the Spede-Heat™ Grenade in OC, CN or CS and the Riot Control Grenade in OC, CN or CS. The similar burn times may make it the appropriate choice for training of simulation deployment of chemical agent canisters. The Saf-Smoke™ formulation is considered to be less toxic than Hexachloroethane (HC) smoke. The Saf-Smoke™ Grenade emits a very white smoke.

In operations, it can be utilized as a carrying agent (multiplier) for smaller OC, CN or CS munitions, or for concealing the movement of agency personnel. It may also be used as a distraction to focus attention away from other activities. The device should be deployed utilizing wind advantage.

It should NOT be deployed onto rooftops, in crawl spaces, or indoors due to its fire-producing capability. Hand throw or launch. Launching of grenades will provide deploying officers additional standoff situations.
